D. Summarize the following passage:

Every year, millions of tons of office paper are discarded. Despite the promise of improved computer systems and networking technologies, a paperless society has yet to materialize, and experts now believe it never will. Even so, there are ways to minimize the trillions of documents that are printed each year. Computer users should use paper and energy in a responsible manner. This requires thought and discipline. It can also make work life easier and less expensive by saving time, storage space, and money. There are three simple steps one can take. First, think before you print. Do you really need a hard copy (printed copy)? Are people asking for a hard copy when an email attachment would work just as well? If you are concerned that your electronic documents will be lost or altered, back them up and store them on removable media such as a CD or a Pen Drive. Kept in a safe place, the electronic copy will not change and will always be accessible. Third, encourage others to print wisely. When someone brings you a printed document, ask him or her to send it by email or give it to you on a removable media next time.
